

**IN THE CLAIMS:**

Please amend the claims as follows:

- sub  
C17
- B1
1. (Currently Amended) A method of generating a medical report, comprising:  
  
displaying a ~~plurality of non-patient specific~~ a plurality of pre-chosen findings  
~~in an abridged format~~ and a separate medical report simultaneously on an electronic  
display, the medical report comprising a summary section ~~with information regarding a~~  
~~specific patient~~; and  
  
automatically copying electronically a respective pre-chosen finding and user-  
selected finding from the displayed pre-chosen findings into the summary section of the  
medical report.
  2. (Original) A method as recited in claim 1, wherein the medical report further  
comprises a plurality of group sections, and  
  
automatically copying electronically each pre-chosen finding into a group  
section of the plurality of group sections which corresponds to the pre-chosen finding.
  3. (Previously presented) A method as recited in claim 1, further comprising:  
  
receiving for a second time a selection of said respective pre-chosen finding  
from the displayed pre-chosen findings, the second selection of said respective pre-  
chosen finding being previously selected and copied in the summary section of the  
medical report; and  
  
automatically removing electronically the second selected respective pre-  
chosen finding from the summary section of the medical report.

4. (Original) A method as recited in claim 1, further comprising selecting the pre-chosen findings from a list of available findings.

5. (Previously presented) A method as recited in claim 1, further comprising displaying on the electronic display an indicator next to the selected pre-chosen finding, separate from the medical report.

6. (Previously presented) A method as recited in claim 5, further comprising:  
receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the medical report;

automatically removing electronically the second selected respective pre-chosen finding in the summary section of the medical report; and

automatically removing electronically the indicator next to the second selected respective pre-chosen finding.

7. (Original) A method as recited in claim 1, wherein the copying further comprises converting the selected pre-chosen finding into a more descriptive form before copying into the summary section.

8. (Currently Amended) A method comprising:

B1  
displaying a list of ~~non-patient-specific~~ predetermined findings and a medical report simultaneously on an electronic display, ~~the medical report comprising a summary section with information regarding said specific patient; and~~

when a respective predetermined finding is electronically selected by a user from the list, automatically electronically copying said respective predetermined finding into the medical report.

9. (Currently Amended) A computer readable storage medium storing a computer program instructing a computer to perform a method of generating a medical report, the method comprising:

displaying a ~~plurality of non-patient-specific pre-chosen~~ findings and a separate medical report simultaneously on an electronic display, the medical report comprising a summary section ~~with information regarding a specific patient; and~~

automatically copying electronically a respective pre-chosen finding and a user-selected finding from the pre-chosen findings into the summary section of the medical report.

10. (Original) A computer readable storage medium as recited in claim 9,

wherein the medical report further comprises a plurality of group sections, and automatically copying electronically each pre-chosen finding into a group section of the plurality of group sections which corresponds to the pre-chosen finding.

11. (Previously presented) A computer readable storage medium as recited in claim 9, further comprising:

b1  
receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the summary section of the medical report; and

automatically removing electronically the second selected respective pre-chosen finding from the summary section of the medical report.

12. (Original) A computer readable storage medium as recited in claim 9, further comprising selecting the pre-chosen findings from a list of available findings.

13. (Previously presented) A computer readable storage medium as recited in claim 9, further comprising displaying on the electronic display an indicator next to the selected pre-chosen finding, separate from the medical report, so that specific information regarding the patient can be identified either from the display of the pre-chosen findings and identified in further detail in the medical report.

14. (Previously presented) A computer readable storage medium as recited in claim 13, further comprising:

receiving for a second time a selection of said respective pre-chosen finding from the displayed pre-chosen findings, the second selected respective pre-chosen finding being previously selected and copied into the medical report;

automatically removing electronically the second selected respective pre-chosen finding in the summary section of the report; and

automatically removing electronically the indicator next to the second selected respective pre-chosen finding.

15. (Original) A computer readable storage medium as recited in claim 9, wherein the copying further comprises converting the selected pre-chosen finding into a more descriptive form before copying in to the summary section.

16. (Currently Amended) A computer readable storage medium storing a computer program instructing a computer to perform a method of generating a medical report, the method comprising:

displaying a list of ~~non-patient specific~~ predetermined findings and a medical report simultaneously on an electronic display, the medical report comprising a summary section ~~with information regarding a specific patient~~; and

when a respective predetermined finding is electronically selected by a user from the list, automatically electronically copying said respective predetermined finding into the medical report.

17. (Currently Amended) An apparatus comprising:

 means for displaying a list of a ~~plurality of non-patient specific~~ predetermined findings and a medical report simultaneously on an electronic display, the medical report comprising a summary section ~~with information regarding a specific patient~~; and

when a respective predetermined finding is electronically selected by a user from the list, means for automatically electronically copying said respective predetermined finding into the medical report.

18. (Currently Amended) An apparatus comprising:

a display unit displaying ~~non-patient specific pre-chosen~~ findings and a separate medical report simultaneously on an electronic display, the medical report comprising a summary section ~~with information regarding a specific patient~~; and

a processing unit automatically copying a respective pre-chosen finding and a user-selected finding from the pre-chosen findings into the summary section of the medical report.
